LIST OF COLLECTING STATIONS

BY

S. F. HARMER, Sc.D., F.R.S.

(Keeper of Zoology, British Museum)

AND

D. G. LILLIE, M.A.

(St. John's College, Cambridge; Member of the Expedition).

INTRODUCTION.

THE greater number of the localities referred to in the following list are places where specimens were collected by the party on board the "Terra Nova"; a large proportion of them being Plankton-stations. To these localities have been added a certain number of places where specimens were obtained by members of the Shore Party, particularly by Surgeon E. L. Atkinson, R.N., and Mr. E. W. Nelson. The list has been verified by Commander H. L. L. Pennell, R.N., who was in charge of the log of the "Terra Nova."

In sorting the collection a system of numbering was adopted which has not proved suitable for more permanent use. These "provisional station-numbers" are indicated in the third column of the list, but the numbers in the second column, corresponding with the maps, are those which should alone be used in recording results and in labelling the specimens.

The Plankton-nets are described according to the number of meshes to one linear inch. The "Full speed" net had 180 meshes to the inch. "Bucket" indicates that the specimens were caught by means of a bucket lowered over the ship's side.

The meaning of a nautical method of indicating the position which has been used in certain cases may not be clear without a word of explanation. Station 80, for instance, is given as "From Summit, Gt. King, N. 87° W., 11 miles." This indicates a point 11 miles from Summit, Gt. King, in a direction 87° from the North, on its Western side; and is in fact almost due West. Similarly, Station 82, which is recorded as "S. 40° E., 29 miles," indicates a point 29 miles from the same place along a line 40° from the South, on its Eastern side, and is thus not very far from South-East. The bearings are all true.
